502
Monitoring of router process status
504
Loosely-coupled synchronization between CP update agent processes and DP update agent processes
506
Detecting and determining of a fatal fault in an active node
508
Continuous switchover in CP/DP entities; resynchronization of CP update agent process and DP update agent process
510
Non-disruptive forwarding of packets/cell in DP based on current FIB(s)/update buffers in redundant data paths
512
Continuous forwarding of packet/cells in DP based on reconfigured FIBs and update buffer conditions
514
